FA17-BCS-037

## Lab 1: Tips for making Android Studio faster

### Common Solution:

### Individual Student's Work:

#### Waleed Afandi:

1. Change Build process heap size (Mbytes) to 1024 and Additional build process to VM Options to -Xmx512m.
2. Only open the project you are currently working on

#### Shamir Afridi:

1. Install SSD in your system and make sure android studio is installed onto the SSD.

#### Ahsan Usman:

1. Restart your windows before working on android studios. This way all the unwanted background tasks will be closed and there will be more memory available for Android Studios.
